Virtual Key for Your Repositories

Project objective:

For this project, I produced a prototype of the application. It can show the user's name and information, as well as information about the User Interface, such as options for showing User Interactions data and features for taking user input to select one of the listed options.

- The welcome information will appear first in this project, followed by a call for user participation, such as accessing.

- The File Operations menu, the files in the given folder, and the application's exit In the display menu settings,

- We may add, delete, and search for files in the folder.
